
DATA DOCUMENTATION ON THE INVENTORY PLOT “SECOND VISIT 5 YEARS LATER” FOREST AND POPLAR GROVE PLOT CAMPAIGN 2010-2012 (1ST VISIT) = CAMPAIGN 2015-2017 (2ND VISIT)

Preface

In 2010 in order to evaluate direct harvesting in the forest, the French national forest inventory decided to return on some plots visited 5 years ago. It concerns the “forest” and “poplar grove” plots, where at least one tree with dbh over 7.5cm has been measured 5 years ago.

Some of those plots have not been found 5 years later, so in that case no piece of information has been taken.

For practical reasons, data taken 5 years later on the plots are given in the downloading column of the year of the first visit. For example, data of the plots visited for the second time in 2017 are given for 2012, year of the first visit.

The inventory plot ID enables the user to link first and second visits.

Exhaustive listing of the raw data

Except if mentioned, all the raw data are collected in the field.

IDP: inventory plot ID

CSA5: land cover (modification 2010)

NINCID5: index of recent incident (nature) (new 2010)

INCID5: index of recent incident (intensity)

DC5: type of cut (new 2010)
